

# Strategic IT Review

## Get the big picture

We believe that what gets measured gets managed and that IT performance is dependent on eight things. We call these the Eight Rocks.

## Who should consider a strategic review?

Any CEO or operations lead who knows things aren't perfect but isn't sure how to change the situation. They may run businesses that:

Have rolled out remote working in a hurry

Are using Microsoft 365 but need to streamline or integrate with legacy applications

Are unsure what they have, how it's being used and where there may be efficiencies

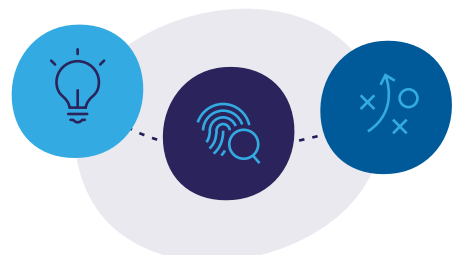

Are unsure whether or not it's fit for purpose

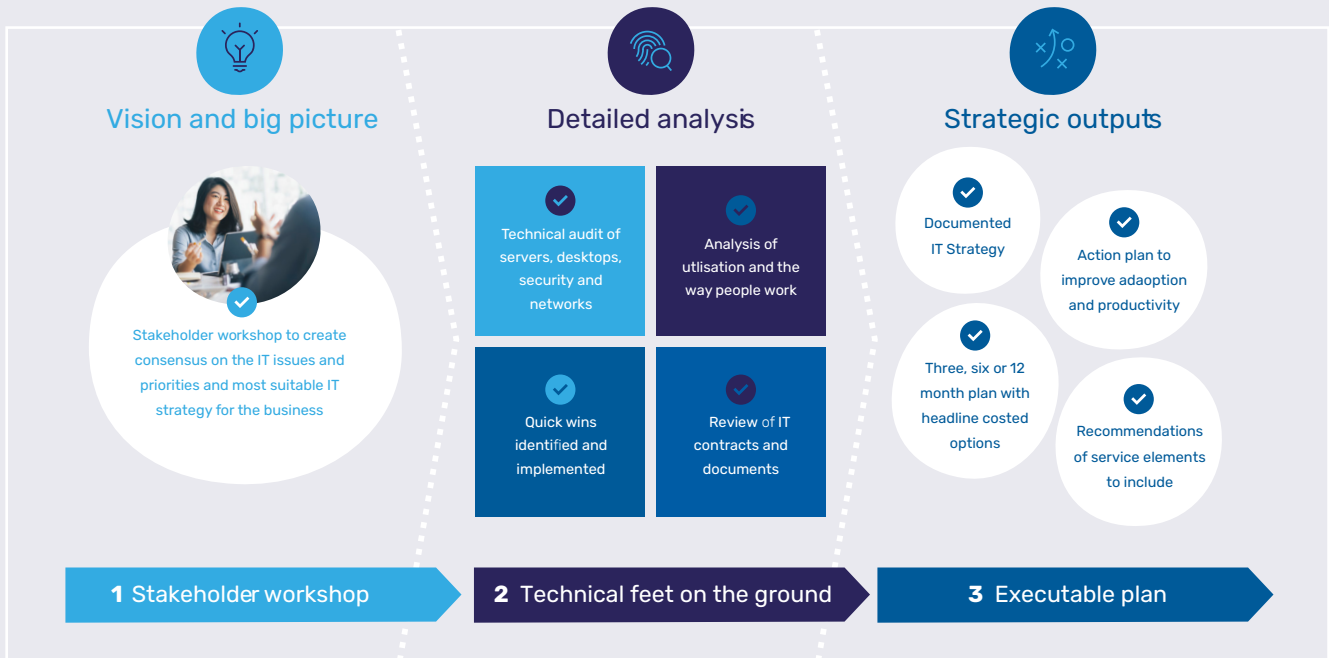

and finally, want to understand if a move to the cloud is the right choice.

## Why consider a strategic review?

A Strategic IT Review will give you the facts you need to make meaningful change whether that's drive adoption of new technology, hire an internal lead, brief an alternative technology provider (Bedroq or otherwise), or renegotiate with your current supplier from a position of strength

# A three stage process to right IT strategy

## What's involved

The Bedroq Strategic gets you to an executable plan. It takes between five and 20 days and you will work with a consultant IT director and their technical team to give you all the facts you need to make informed decisions about the way forward.

- 1 The scope of the engagement is determined in step one: a stakeholder workshop to create consensus on the business priorities and IT vision. This informs the next step.
- 2 Which involves technical boots on the ground to build a detailed understanding of how IT currently stacks up. Depending on the objectives we'll get as close as possible to understanding how people use technology in the business and their personal needs.
- 3 Finally, we put together the documentation, a set of recommendations and headline costs that would be required to make an informed decision about the future

This may involve board level input to understand wider business goals, user and stakeholder interviews if appropriate, a high-level review of how your employees use systems across the business and an assessment of your network, systems and applications. Depending on requirements, we will also collate and review all contracts and documentation relating to IT provision.

## Outcome of the review

The outcomes will be different for every business. Some clients need to focus on immediate tactical requirements, others want to spend time on the big picture. Most organisations need a combination of both.

The fee is determined by the scope of the review, size of the organisation and the number of data points to analyse.

### The outcome for the business is

- Visibility of potential cost savings
- A plan to get best value from the existing technology
- Prioritised and costed list of strategic and tactical things to plan for
- Benchmarks against which to gauge productivity and engagement with technology
- The full toolkit to make immediate improvements to technology performance in their business
