

Bedroq IT Cyber Risk Assessment

Understand the threat.
Make informed decisions.

Bedroq’s Cyber Risk Assessment gives organisations a clear, honest picture of your cyber security posture, identifying vulnerabilities across technology, people, and process, and turning every finding into a prioritised, actionable roadmap for resilience.

Our Cyber Risk Assessment is scalable and it goes beyond the technology. Our experts work alongside your IT teams, business leaders, and operational staff to understand not just what systems you have, but how well they are used, governed, and protected. We assess identity and access controls, endpoint coverage, network configuration, cloud security, staff awareness, and third-party risk, then build a practical improvement plan tailored to your organisation.

Our Seven-Step Cyber Risk Assessment

“Cyber security is now a matter of business survival and national resilience.”

Dr Richard Horne,
Chief Executive
National Cyber Security Centre

National Cyber Security Centre

a part of GCHQ

The assessment covers seven structured phases, from initial scoping and stakeholder interviews to a full security baseline review across your entire environment.

Findings are classified by risk priority and mapped to clear, timed actions: **quick wins inside 30 days**, **targeted improvements at 90**, and **strategic initiatives over 12 months**.

You receive an executive summary, a detailed technical report, and a practical roadmap your team can act on from day one.
